Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The present invention is drawn to an input and output circuit of a semiconductor device utilizing a control signal generating means, an output buffer and an input buffer recited in claims 1-25. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: "the control signal generating means ... under a power off condition of the semiconductor device" in combination with the details of "the output buffer" and the details of "the input buffer" as recited in claim 1; "the control signal generating circuit ... under a power off condition" in combination with the details of "the output buffer" as recited in claim 14; "the control signal generating means ... a power off condition of the semiconductor device" in combination of the details of "the input buffer" as recited in claim 21; "the control signal generating portion .. under a power off condition" in combination with the details of "at least one output buffer" as recited in claim 25.

The prior art references submitted by the applicant on IDS form received on 09/14/04 was reviewed and considered. These references appear to be the best references with respect to the claimed invention (e.g. input and output circuit) and closely matched most of the references found during the examiner's searches. However, as noted above, at least one limitation lacks in these prior art. Therefore, the claims are patentably distinct over all these prior art references of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
